

à l'attention de Mme Van Der Leyen, présidente de la
Commission Européenne,
Mr Kalamarz, Health commission
sante Consultation Group
Parlement Européen
Cour Européenne des Droits de l'Homme

copie : M. le Président de la République française,
Ministre de la Santé
Haute Autorité de Santé
Santé Publique France

Mr Kalamarz,

Thank you for your answer of 23 July 2020, but we have different points we don't agree with you, unfortunately.

First you're using the word « **potential** » adverse health effects « **that may be** » associated with the exposure to electromagnetic fields. There is so much studies about all the parameters which are impacted by these fields. The bioinitiative report 2012 shows definitely changes in blood formula : vit D, melatonin, and increase of histamine and oxidative stress, all this generate drop of immunity system up to cancers. So many studies are proving the effect of microwaves on life and cells, even in vegetal and animal life, **but no one can prove that there is no effect on life and cells**. This should be enough to take measures of protection (ALARA).

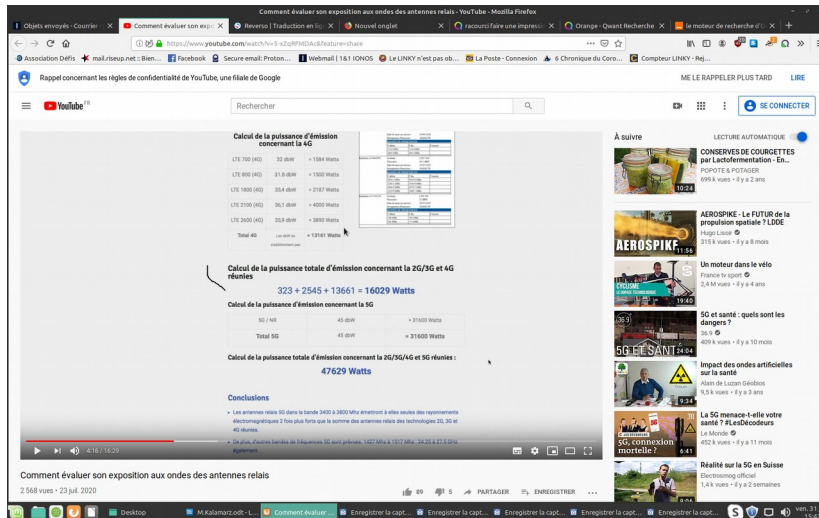

You are basing on ICNIRP recommendations which are outdated definitely ; 20 years old, and at this time, based on 5 minutes exposure per day ! We are far above today. ICNIRP is composed of 14 scientists who have done researches for telephone industries, in conflict of interests. ICNIRP is a private organisation in Germany right not far from Munich. In this staff, there is only one medical expert, but not specialised on exposure effects. ICNIRP is also working along with ICES (Comité International sur la Sécurité Electromagnétique) and IEE, American organisation with a lot of professionals derived from media industries and army.

Secondly, there are using, as every country, measuring instruments for analog waves, and still take account of the power, while the most important measures are frequencies, and the resonance with parts of the body, and the volume of data, which is phenomenal today with the photos and videos, much heavier.

That means health effects levels chosen by ICNIRP are not protecting population at all. And the few trials for professional diseases in different European countries have been won by the workers. You must know also that insurance companies don't insure all medical and technical troubles due to

microwaves, behind the Lloyd company in 2003. They must have taken this decision behind medical and scientific studies .

You are saying that 5G would reduce the global exposure : not at all, because all these exposures would be additionned : 2G, 3G, 4G, 5G. As you can see below $2G + 3G + 4G = 16029$ watts and when you add 5G this will be : **47629 watts** : (source Orange)

And if you measure the volume of datas, and not only power, you understand it's gonna be a terrible mess all around our bodies, passed through continually by microwaves. And it's one thing to measure one wave in a closed laboratory, and another to measure it in a real situation, summed all together sources and frequencies, as you can find it in most of towns (lignes HT, BT, wifi, bluetooth, eoliennes, voies ferrées, antennes relais).

One study in Germany on a hundred trees followed during 9 years shows that they are -as every alive cell- **burning**.

[https://www.europarl.europa.eu/RegData/etudes/BRIE/2020/646172/EPRS_BRI\(2020\)646172_FR.pdf](https://www.europarl.europa.eu/RegData/etudes/BRIE/2020/646172/EPRS_BRI(2020)646172_FR.pdf)

As it is in our heads and bodies. I guess ICNIRP doesn't even measure the temperature rise, as a lot of hypersensitive electro people have to use cold water or ice to low the pain after they have been exposed to micro waves. All the micro waves, has being setted by the army, and Dr Barrie Trower, who have been working all his life on them, says the oocytes of little girls in their mum bellies, are impacted, directy to the NDA, as probably they won't have any babies themselves later.

Europe have spended millions of euros to install wifi in every little town, you have certainly read parlement report on february 2020 (link above) based on scientific studies, and one them from 2018 telling how to get « diabete » for sure on rats : you just have to put them in 2,4 Ghz, as wifi emission... Wifi is opening the Encephalic Hemato Barrier and let molecules get into it, as heavy metals, nanos, cholesterol and so on, wich can create among others neurologic diseases.

You are also using the argument of less power consumption than 4G ; It looks it is the contrary, as you can read reports of EELV in France ; 20 % more says Xiaomi :

<https://www.phonandroid.com/5g-selon-xiaomi-elle-est-20-plus-energivore-que-la-4g.html>

If you think the exposure of electromagnetic fields is not so dangerous, how can it be that in some places, the power level has been lowered ? In France we have as in many European countries 41 and 61 volt/mètre, but in Paris ??? 2 volts/meter... why ? In Luxembourg 3 volts/meter just where you're working... Switzerland 6 v/m ? Brussels doesn't want to install 5G ? just where set European Commission...

Telling us we just have to manage with mobile phones ourselves is a terrible denial and institutional violence. We cannot accept that : a lot of people are living in caves, tents, trailers, to hide themselves against micro waves. They don't have anymore professional or private life, and try just to survive. You are as we say it to France government torturers, because there is other ways to communicate ; let install fiber and Arise levels.

Most of the European countries have already about 10 % people who have electromagnetic symptoms... this means millions of people. As you remember Mrs Gro Harlem Brundtland, who has been minister in Norway, and President of WHO, was one of them.

Do not treat us as children ; we are citizens and have the right to tell you when you are going in the wrong way. European laws give us the power to do so.

Salutations Citoyennes
